## SCATTER PLOT PROJECT

For this assignment, you will gather data from your classmates to create three different scatter plots. You should pick variables for each graph that will likely result in one scatter plot with a positive correlation, one with a negative correlation, and one with no correlation.

## STEP 1: PICK YOUR VARIABLES.

Each of your three scatter plots should have different variables. Make sure that you are picking something that can be measured with numbers (age in months, height in inches, number of siblings, number of letters in a name, etc).

## STEP 2: ANSWER QUESTIONS.

Answer the questions on the front of the question sheet - explain why you expect each scatter plot to have the kind of correlation you selected.

## STEP 3: GATHER YOUR DATA.

Ask your classmates to provide data for your three scatter plots, and record their names and responses on the provided data sheet.

## STEP 4: PLOT YOUR DATA POINTS.

Label your $x$ and y axes, and decide on an appropriate scale for your axes. Plot all of your data points for each of your three scatter plots.

## STEP 5: ANSWER QUESTIONS.

Answer the questions on the back of the question sheet - did your scatter plots look the way you expected them to?

## STEP 6: LINE OF BEST FIT.

Draw a line of best fit on the scatter plot that has a positive correlation and the scatter plot that has a negative correlation. Determine the equation for each line of best fit, and record it on your question page.

## SCATTER PLOT 1 - POSITIVE CORRELATION DATA

| Name | Variable 1: | Variable 2: |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

SCATTER PLOT 2 - NEGATIVE CORRELATION DATA

| Name | Variable 1: | Variable 2: |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

## SCATTER PLOT 3 - NO CORRELATION DATA

| Name | Variable 1: | Variable 2: |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |
|  |  |  |

## SCATTER PLOT QUESTIONS

1) What variables did you choose for your positive correlation scatter plot? Why do you think these variables will have a positive correlation?
2) What variables did you choose for your negative correlation scatter plot? Why do you think these variables will have a negative correlation?
3) What variables did you choose for your no correlation scatter plot? Why do you think these variables will have no correlation?

## SCATTER PLOT QUESTIONS

4) Did any of the results of your questions surprise you? If so, which ones? Did the correlations turn out as you expected? Were any variables more or less correlated than you expected?
5) Write the equation for the line of best fit for your first scatter plot (positive correlation).
6) Write the equation for the line of best fit for your second scatter plot (negative correlation).

SCATTER PLOT 1 - POSITIVE CORRELATION

## SCATTER PLOT 2 - NEGATIVE CORRELATION

## SCATTER PLOT 3 - NO CORRELATION

SCATTER PLOT PROJECT - GRADING RUBRIC

Total points (out of 15):

If students are having trouble coming up with ideas for their variables, here are some that students have had success with in the past:
$\left.\begin{array}{|c|c|c|}\hline \text { Positive Association } & \text { Negative Association } & \text { No Association } \\ \hline \begin{array}{c}\text { Height in inches \& shoe } \\ \text { size }\end{array} & \begin{array}{c}\text { Number of hours spent } \\ \text { watching tv \& time spent } \\ \text { asleep }\end{array} & \begin{array}{c}\text { Number of Instagram } \\ \text { followers \& height }\end{array} \\ \hline \begin{array}{c}\text { Number of siblings \& } \\ \text { number of bedrooms in } \\ \text { house }\end{array} & \begin{array}{c}\text { Number of pages read in } \\ \text { [book assigned in ELA] \& } \\ \text { number of pages left to } \\ \text { read }\end{array} & \begin{array}{c}\text { Number of pets \& } \\ \text { favorite number }\end{array} \\ \hline \begin{array}{c}\text { Number of library visits } \\ \text { \& number of books read }\end{array} & \begin{array}{c}\text { Number of sports played } \\ \text { \& time spent playing } \\ \text { video games }\end{array} & \begin{array}{c}\text { Last digit of phone } \\ \text { number \& length of hair }\end{array} \\ \hline \text { Height in inches \& } & \begin{array}{c}\text { School absences \& test } \\ \text { average }\end{array} & \begin{array}{c}\text { Locker number \& house } \\ \text { number }\end{array} \\ \hline \text { Distance from school \& in inches } \\ \text { time to get to school }\end{array} \begin{array}{c}\text { Number of states visited } \\ \text { \& number of states left } \\ \text { to visit }\end{array} \quad \begin{array}{c}\text { Forearm length \& } \\ \text { number of close friends }\end{array}\right]$
