# GRADE 6 MATH: GROCERY SHOPPING AND THE QUILT OF A MATH TEACHER

### UNIT OVERVIEW

This unit contains a curriculum-embedded Common Core—aligned task and instructional supports. The task is embedded in a 2–3 week unit on expressions.

#### TASK DETAILS

Task Name: Grocery Shopping and The Quilt of a Math Teacher

Grade: 6 Subject: Math

Depth of Knowledge: 3

Task Description: There is a combination of two tasks that will be administered as this culminating assessment. The "Grocery Shopping" task will assess students' knowledge of representing equivalent expressions and being able to justify this through the use of the distributive property. The second task is "The Quilt of a Math Teacher". This task will assess students' knowledge of formulating an algebraic expression based on a real-life situation, while addressing Mathematical Practice standards as well.

#### Standards

- 6.EE.2 Write, read, and evaluate expressions in which letters stand for numbers.
- 6.EE.2a Write expressions that record operations with numbers and with letters standing for numbers.
- 6.EE.2b Identify parts of an expression using mathematical terms (sum, term, product, factor, quotient, coefficient); view one or more parts of an expression as a single entity.
- 6.EE.2c Evaluate expressions at specific values of their variables. Include expressions that arise from formulas used in real-world problems. Perform arithmetic operations, including those involving whole-number exponents, in the conventional order when there are no parentheses to specify a particular order.
- 6.EE.3 Apply the properties of operations to generate equivalent expressions.
- 6.EE.4 Identify when two expressions are equivalent (i.e., when the two expressions name the same number regardless of which value is substituted into them).

This Project is due Tuesday December 1st, 2015!

Task 1: Popping Off With Algebra
Let h represent the number of hours Shaunda spent on homework last week.
Part A
Zack spent 1/2 as much time on his homework as Shaunda, plus an additional 3 hours. Write an expression for the number of hours he spent on his homework.
Expression:
Part B
Identify the number of terms, coefficient and constant in the expression above.
Number of terms: Coefficient: Constant:
Part C
Shauna spent 12 hours doing her homework. How many hours did it take Zack to complete his homework?
Show your work.

Zack: \_\_\_\_\_ hours

Task 2: Dogging Algebra
Franklin, a pit bull, weighs $p$ pounds. For Part A, write an expression for the weight in pounds of each of the dogs. Each expression should include the variable $p$ .
Part A
Tatu, a pug, weighs 49 pounds less than Franklin:
Mia, a Chihuahua, weighs 1/17 as much as Franklin:
Lucy, a Great Dane, weighs twice as much Franklin, minus 15 pounds:
Part B
Set up a chart or organizer to represent the weights of the four dogs.
Part C
Franklin weighs 68 pounds. How much do Tatu, Mia, and Lucy weigh? Show or explain how you found this.
Tatu: pounds; Mia: pounds; Lucy: pounds

## **Grocery Shopping**

The table below shows the prices of different items at A and B Supermarket.

Prices
\$3
\$7
\$4
\$5
\$7

Mr. D buys 3 packs of Oreos and 3 pounds of ham.

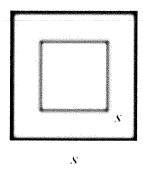

1. Write two equivalent expressions to represent the total amount Mr. D will pay for the items he buys.

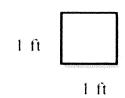

Ex	pressions:	and	
			والمراجع والمنافع وليا والمنافع والمنافع والمنافع والمنافع والمنافع والمنافع والمناف

2. Explain how Mr. D can use the distributive property to calculate the total amount he has to pay.

## The Quilt of a Math Teacher

Mrs. Mothes is making a quilt in the shape of a square for her younger sister. The border of the quilt is made of 1-foot by 1-foot patches. She asks one of her students, Maria, to use the picture of the quilt below to write an expression to illustrate the number of patches needed to border the square quilt with side length *s*.

The square quilt has side length *s*. (Not drawn to scale.)

Patch (Not drawn to scale.)

Maria writes: (s + s + s + s) + (1 + 1 + 1 + 1)

Part A: Is Maria's expression correct? Explain your reasoning.

**Part B**: Mrs. Mothes asks four other students (Samantha, Jerry, Nadia, and Joseph) to generate expressions that are equivalent to Maria's expression.

- 1. Samantha's expression: 4s + 4
- 2. Jerry's expression: 4(s + 1)
- 3. Nadia says the correct expression is  $4s \pm 1$
- 4. Joseph writes: 2s + 2(s + 2)

How many of the students wrote a correct or an incorrect expression? Justify your answer with a detailed explanation.
